

Oilfield Products

Micro-Bac's oilfield line of products is utilized around the world to increase production, reduce deposition of paraffins and asphaltenes, improve flow characteristics and enhance water flood economics.

Standard Oilfield Products

- | | |
|-----------------------------|--|
| Para-Bac™ | - Wide range paraffin control |
| Para-Bac™ X, XX, XXX | - Paraffin control within specific carbon chain ranges |
| Para-Bac™ S | - Wide range paraffin control |
| Ben-Bac™ | - Wide range asphaltene control |
| Corroso-Bac™ | - Corrosion control |
| Litho-Bac™ | - Scale control |
| Gum-Bac™ | - Repairs unsuccessful guar based fracture jobs |
| Frac-Bac™ | - Repairs unsuccessful polymer-based fracture jobs |

Standard Oilfield Applications

- | | |
|----------------------------------|---|
| Stimulation | - Average production increase since 1986 is 50% with typical increases near 70% |
| Initialization | - Good success in breaking through HOT zone to clear pathways for lighter oils to flow |
| Maintenance (pump) | - Replaces chemicals, hot oiling, scraping and other techniques through monthly treatments |
| Maintenance (water flood) | - Enhances water flood performance with monthly treatments of injection water to reduce scale and corrosion |
| Tank Cleaning | - Separates oil/water for maximum oil recovery and eliminates personnel entry |
| Fracture Repair | - Degrades job frac obstructions that did not break |

All products are sold in 5-gallon, 55-gallon or tote quantities.
