

INTRODUCTION

Accumulated food wastes, overloaded grease traps, and foul-smelling operations have always been a problem in food service operations. In large food processing plants, the effects can be even worse. Blockages slow production flows and increase operating costs. Pumping, filtering, and disposal costs, as well as municipal wastewater surcharges, strain the bottom line. Foul odors are bad for customers and employees alike.

Until recently, solutions to correct these problems have been costly and time-consuming. Chemical solutions have only compounded the environmental problems associated with these cleanups. Until now!

MEGA-BAC™

A 100% Natural Biological Process
For Correcting and Controlling
Wastewater Problems
In The Food Industry

Mega-Bac is nature's way of solving the problem of grease and food waste control. Safe, natural, effective...Mega-Bac bacteria is non-toxic, non-pathogenic, and harmless to animal life. Mega-Bac helps protect the environment!

Mega-Bac's bacterial products can turn problem situations into profitable, hassle-free operations for the food industry. With regular use, Mega-Bac can:

- Reduce waste accumulations,
- Eliminate foul odors,
- Lower costs for maintenance, equipment, and energy,
- Curtail use of chemicals, and
- Reduce wastewater surcharges (by 50% and more).

This means that Mega-Bac saves money, time, and trouble. Best of all, Mega-Bac can accomplish all of this in an environmentally safe and effective manner.

Mega-Bac ---- one of the fine family of Micro-Bac International products developed for the good of business and the good of our environment.
